

# Securing Your Investment

Accessories and Edge Detail to  
Complete Your Duro-Last® Roofing System

# Proven Accessories and Edge Detail

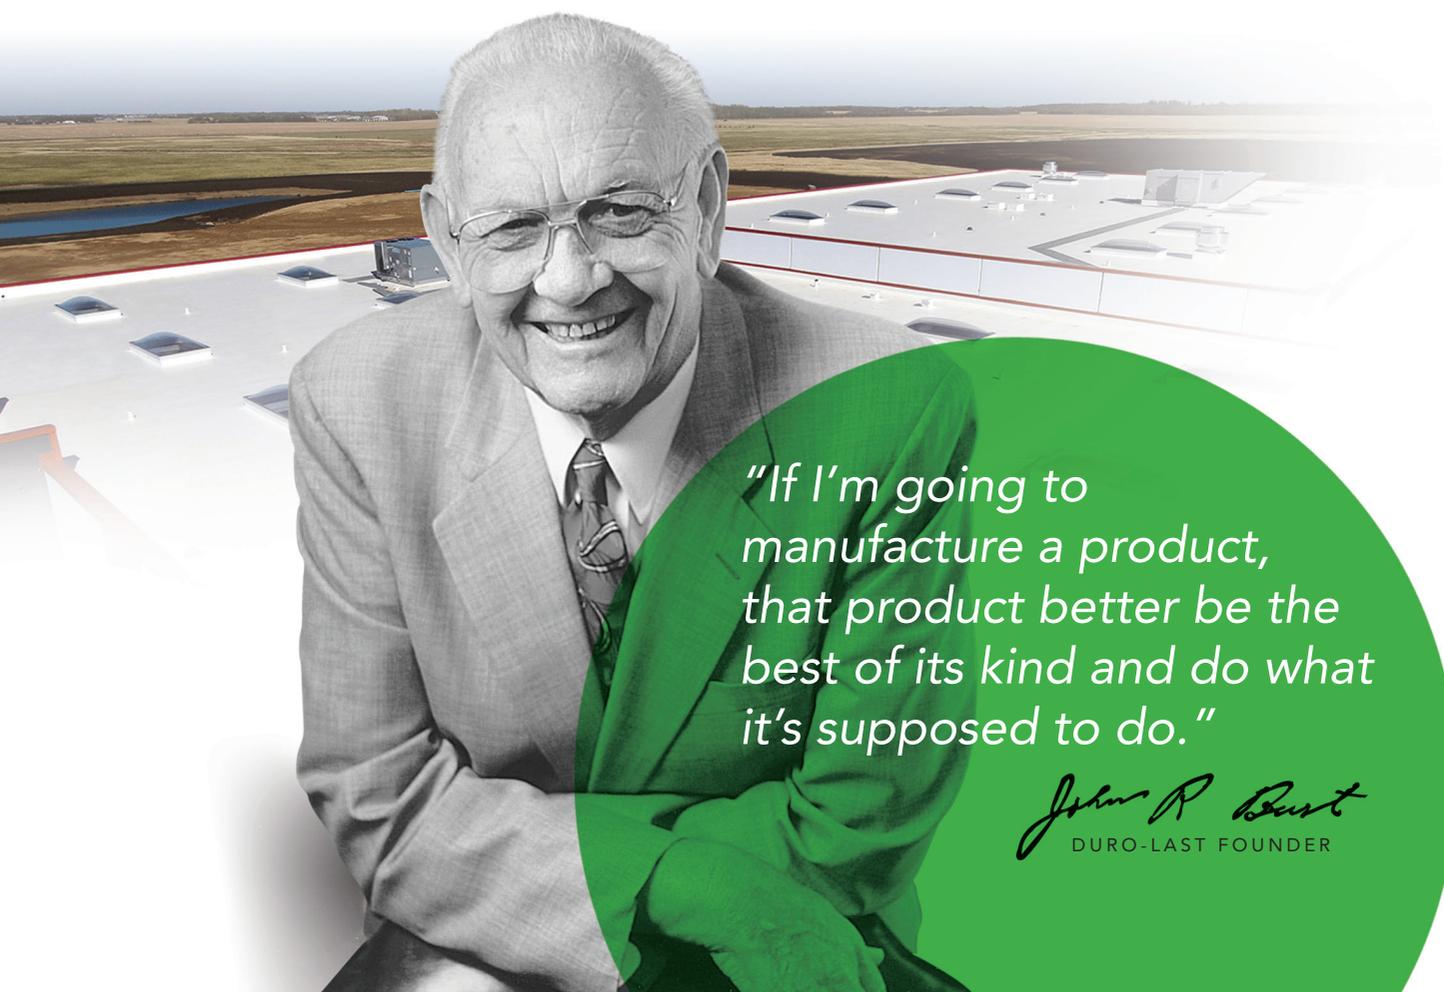

Duro-Last is the world's premier manufacturer of custom-fabricated single-ply roofing systems.

Our reputation stems from long-term family ownership, time-tested product formulation, custom-fit accessories and trims, and dependable, authorized contractors. Our roofing system is the Proven Performer® — delivering unmatched performance and providing building owners with peace of mind when using our customized accessories and edge detail that add lasting durability.

## Vertical Integration

Duro-Last Roofing Systems are made in-house, ensuring high quality products to cover your investment. From the membrane, penetrations and accessories, to edge metal, insulation and even our fasteners, all are designed to work together to protect and secure your investment. And cleaner installations mean less waste and fewer jobsite disruptions, which decreases the impact on your bottom line.

Each custom-fabricated Duro-Last Roofing System has up to 85 percent of its seams completed in our factory-controlled environment before the roofing system is delivered to the jobsite. Coupled with our custom accessories that eliminate onsite workmanship at critical transitions, installers gain the advantage of a faster, easier installation. And building owners enjoy the superior waterproofing and aesthetics.

*"If I'm going to manufacture a product, that product better be the best of its kind and do what it's supposed to do."*

*John R. Rust*  
DURO-LAST FOUNDER

# Custom-Fabrication Saves Time and Money

Custom-Fabricated Deck Sheets

Duro-Last's Exclusive Two-Way Air Vents

Custom-Fabricated Stack Flashings

Duro-Light™ Skylights

Custom-Fabricated Parapets and Wall Flashings

## It's as easy as it "seams."

Roofers know that vertical to horizontal transitions are the biggest source of roof leaks — and one of the most time-consuming elements of an installation. When compared to the competition, Duro-Last products are easier and faster to install — sometimes cutting installation time in as much as half. And less labor means more Time Off The Roof™. The result: better first-time quality, fewer callbacks, less waste, labor savings and superior leak prevention.

### 1 Custom-Fabricated Deck Sheets

Our flagship Duro-Last membrane features deck sheets that are custom-fabricated in sections up to 2,500 square feet, fitting each roof precisely to its unique specifications. Instead of in the field, up to 85 percent of the seams are completed under ideal, factory-controlled conditions — reducing waste, saving on labor and preventing leaks.

### 2 Duro-Last's Exclusive Two-Way Air Vents

Our breather vents help control negative air pressure and promote air flow in mechanically attached systems.

### 3 Custom-Fabricated Stack Flashings

Duro-Last's stacks are also custom-fabricated — from 1" diameter up to any required size. Factory custom-fabrication reduces field labor costs and the leaks that are common with site-created flashings.

### 4 Duro-Light™ Skylights

Offering thick, high density lenses, Duro-Light skylights utilize two systems to prevent water penetration: A robust tape and glazing application along with a unique, high performance weather seal that provides air and water infiltration resistance as well as reduced condensation.

### 5 Custom-Fabricated Parapets and Wall Flashings

Parapet and wall flashing details are custom-fabricated to fit these surfaces exactly, reducing onsite labor and material waste. If required by the project, flashings can be made to completely wrap the parapet — providing waterproof protection against leaks related to aged wall surfaces.

# Exceptional Roofs Require Exceptional Details

Duro-Last and EXCEPTIONAL® Metals are your source for custom-fabricated roofing materials, manufactured to fit each unique building's requirements.

Duro-Last deck sheets and nearly all related components are manufactured under factory-controlled conditions. Custom-fabricated stack and curb flashings significantly reduce rooftop labor from critical areas — penetrations and transitions. And our EXCEPTIONAL Metals division manufactures a wide variety of standard and custom metal details, providing watertight integrity with remarkable appearance.

# EXCEPTIONAL Metals Details

## When it's easy to do, it's easy to do right.

Selecting your edge metal roof details and drainage accessories from EXCEPTIONAL Metals is convenient and easy. Our broad product line, available in various metal finishes, offers plenty of design options. Additionally, our vinyl-coated products complement a Duro-Last Roofing System by providing a secure bond between the accessory and membrane. EXCEPTIONAL Metals can even fabricate custom products to meet your needs.

### Edge Details

High-quality metal edge details create durable, reliable terminations and transitions with Duro-Last and other single-ply membrane roofing systems. Edge details are available in a variety of stock finishes, which are usually shipped within five business days, as well as in custom finishes and designs. Our edge details include:

- Universal Two-Piece Snap-On Compression Edge
- High-Profile® Fascia
- Snap-On Fascia Base
- Gravel Stop Covers
- Fascia Covers
- Edge Extenders
- T-Edge
- Vinyl-Coated Drip Edge

### Coping

Our various coping systems provide a complete finish to any commercial roofing project, including flat, canted, snap and arched coping, as well as custom copings that meet your specific design needs.

### Collectors and Scuppers

Thanks to EXCEPTIONAL Metals precision craftsmanship, our collector boxes and scuppers are manufactured to exact specifications, offering you through-wall drainage in a package that not only enhances the aesthetics of your design, but provides watertight solutions that are unique to the industry.

# Additional Accessories

A variety of additional accessories are available through Duro-Last to complete your roofing system, including but not limited to:

## Roof-Trak® III Walkway Pad

Roof-Trak III is a non-skid, maintenance-free walkway pad manufactured from recycled Duro-Last membranes. Designed to provide protection in heavily traveled rooftop areas, the pads also provide added protection around mechanical equipment and as a separator for sleepers that support mechanical equipment.

## KnuckleHead Rooftop Supports

KnuckleHead Rooftop Supports are designed to provide structural support for piping, electrical and mechanical equipment. These stands help with the load distribution of heavy objects on rooftops and are compatible with all Duro-Last Roofing Systems.

## Plenum Vents

These vents are fabricated from a rigid exterior vinyl and have a 6-inch skirt made from Duro-Last's proprietary thermoplastic roofing membrane. Designed to allow passive air exchange between unconditioned attic space and the outside atmosphere, Plenum Vents incorporate a vent screen and a large vent cap to protect against water infiltration.

## Duro-Last® Roof Pavers

Duro-Last Roof Pavers are heavy duty interlocking 24-inch by 24-inch pavers designed to protect a variety of roofing systems from damage due to excessive traffic and maintenance work. Featuring a half-inch thick top layer and half-inch thick bottom layer, Roof Pavers can also be used for rooftop patios, work areas, and other high-traffic spaces.

## Drains

Duro-Last offers custom-fabricated Drain Boots, OMG SpeedTite® Roof Drains, and drain covers. Duro-Last Drain Boots can be used in most circular roof drains and are especially useful in reroofing applications. Additionally, Duro-Last Drain Boots are fabricated from our specially formulated roofing membrane, ensuring a long-lasting, watertight flashing.

## Rooftop Anchors

Designed to provide a simple solution for the installation of solar roofing systems without the use of heavy ballasts, these anchors are sturdy enough to withstand high winds and heavy seismic activity. U-Anchor 2400™ attachments by Anchor Products are available, as well as OMG PowerGrip™ Plus anchors.
